About

The Bigfix Winget Dashboard utilizes Winget on Windows 10 and Windows 11 endpoints. It will dynamically determine which Winget or Microsoft Store applications have version updates.

NOTE: *The Winget Dashboard is compatible for both non-local admin and local admin users.*

You can also use the provided Bigfix tasks to Upgrade, Install or Uninstall applications recognized by Winget.

In addition, you can deploy the Winget Auto Offer task, which will automate the creation and deployment of applications requiring updates in your environment.

NOTE: *Currently, Upgrading, Installing and Uninstalling applications using Winget require the target user to have local administrator privileges.*

Note: *WinGet is only supported on Windows 10 1709 (build 16299) or later*

Deployment

To deploy the Bigfix Winget Dashboard, perform the following:

1. Unzip the WingetDashboard.zip file.
2. Place the _dashboard.html file into the wwwrootbes\Uploads directory of your root server.
3. Create a custom site called Winget Dashboard and subscribe all Windows 10 and Windows 11 endpoints as well as the Root Server.
 - a. Import the “Winget Dashboard Fixlets.bes” file
 - b. Import the “Analysis-Winget_MSStore Apps” analysis
 - c. Import the “Baseline-Deploy WinGet Dashboard” baseline
 - d. Import the custom web report “WinGetApplications.besrpt”
 - e. Import the custom web report “Winget All Identified Installed Applications.besrpt”
4. Deploy the “Deploy Winget Dashboard” baseline.
 - a. You may want to create a Bigfix Group and subscribe endpoints who require the Winget Dashboard.
5. Deploy the “Update WinGet Application Dashhboard” task.
 - a. This is currently set to run every 30 minutes.
6. Deploy the “Update All WinGet Applications” task.
 - a. This is currently set to run once per day

The dashboard should now be installed and configured on the endpoints.

Updated a minute ago

Usage

Use the following instructions to update, install or uninstall applications using the provided Bigfix tasks.

NOTE: Currently, Upgrading, Installing and Uninstalling applications using Winget require the target user to have local administrator privileges.

WINGET UPDATE OFFER: <APPNAME>

This task will be deployed as an offer and will only be active if it is determined that the user has this application installed and is in need of an update. It will automatically update the application to the latest version. The offer will never expire and will become active once again should a new version be detected.

To deploy this task, perform the following:

1. Click on 'Take Action'
2. Provide the application ID. This can be found by viewing the "WinGet/Microsoft Store Application List" Web Report, or by viewing the results of the "Winget/MSStore Apps" analysis. **NOTE: These ID's are CASE SENSITIVE.**

Action Parameter

Please enter the Winget ID of the Application. This is CASE SENSITIVE:

Notepad++.Notepad++

Ok Cancel

3. Provide the application source. This can be found by viewing the “WinGet/Microsoft Store Application List” Web Report, or by viewing the results of the “Winget/MSStore Apps” analysis. It will be either “winget” or “msstore”

Action Parameter

Please enter the Winget Source of the Application:

winget

Ok Cancel

4. Change the name of the action by replacing <APPNAME> with the actual application name.

Take Action

Name: WINGET UPDATE OFFER: Notepad++

Category: WINGET UPDATES

5. Go to the “Offer” tab and replace “<APP NAME>” with the actual application name.

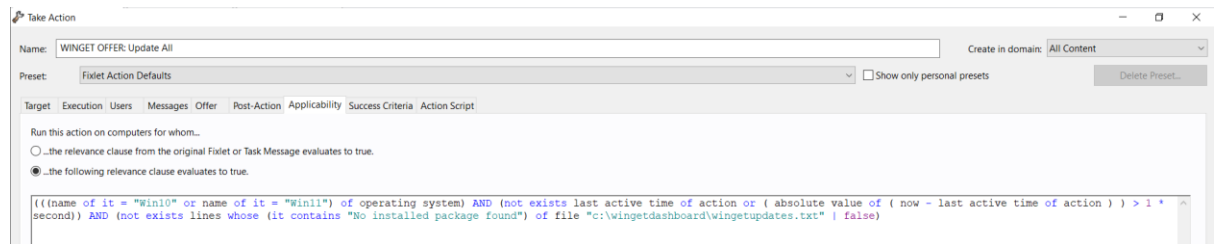

☒ Make this action an offer

☐ Notify users of offer availability

Title: Notepad++ Update

Category: WINGET UPDATES

6. Go to the “Applicability” tab and click on the radio button “... the following relevance clause evaluates to true”. Now modify the relevance and replace “<APP ID>” with the actual application id.

For Example:

(((name of it = "Win10" or name of it = "Win11") of operating system) AND (not exists last active time of action or (absolute value of (now - last active time of action)) > 1 * second)) AND (exists file (data folder of client as string & "_UISupport_dashboard.html")) AND (exist line whose (it contains "**Notepad++**.**Notepad++**") of file "c:\\wingetdashboard\\wingetupdates.txt"))

7. Use a group to target endpoints and click OK to deploy the action. This action offer will remain open and be activated should there be a version update for the application.

WINGET INSTALL OFFER: <APPNAME>

This task will install new software using Winget or the Microsoft Store as a source. It will be deployed as an offer

To deploy this task, perform the following:

1. Click on 'Take Action'
2. Provide the application ID. This can be found by opening a command line and executing the following:
winget search <app_name>

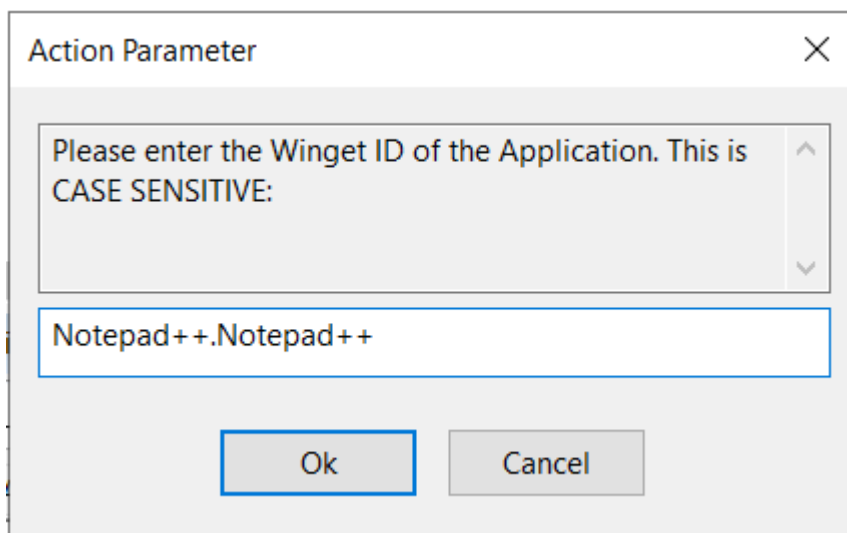

To search for "Notepad++" as an example:

```
C:\Users\michael.english>winget search notepad++
```

Name	Id	Version	Match	Source
Notepad++	Notepad++.Notepad++	8.7		winget
Notepad Next	dail8859.NotepadNext	0.8	Tag: notepad++	winget

Retain the Id and the Source and enter them in the action parameter windows

NOTE: These ID's are CASE SENSITIVE.

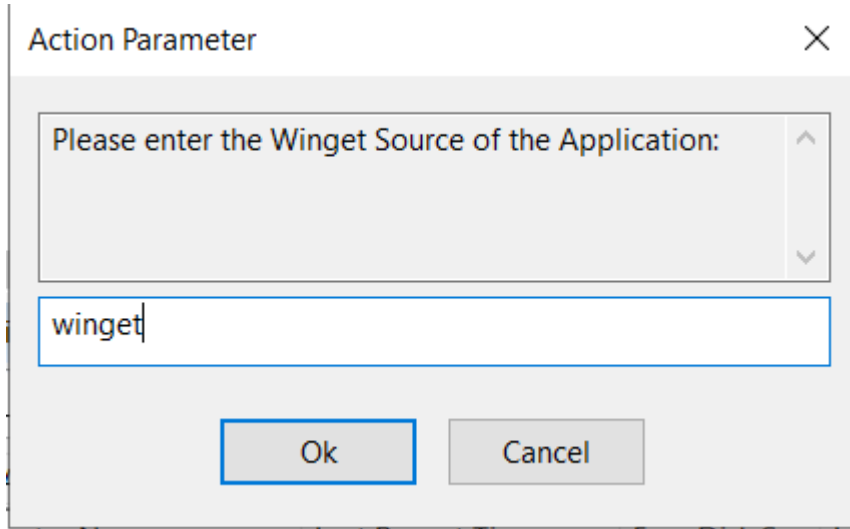

Action Parameter

Please enter the Winget ID of the Application. This is CASE SENSITIVE:

Notepad++.Notepad++

Ok Cancel

3. Provide the application source.

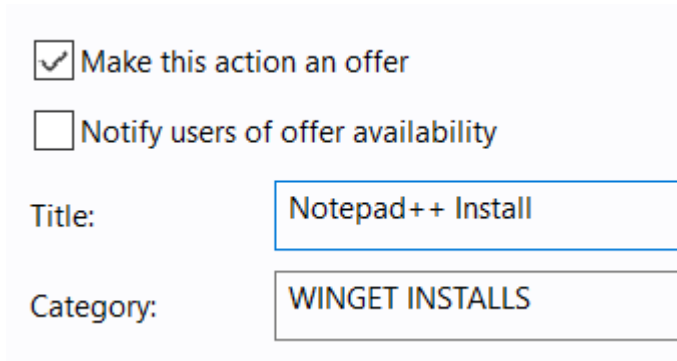

Action Parameter

Please enter the Winget Source of the Application:

winget

Ok Cancel

4. Update the name of the action appropriately.
5. Go to the “Offer” tab and replace “<APP NAME>” with the actual application name.

☒ Make this action an offer

☐ Notify users of offer availability

Title: Notepad++ Install

Category: WINGET INSTALLS

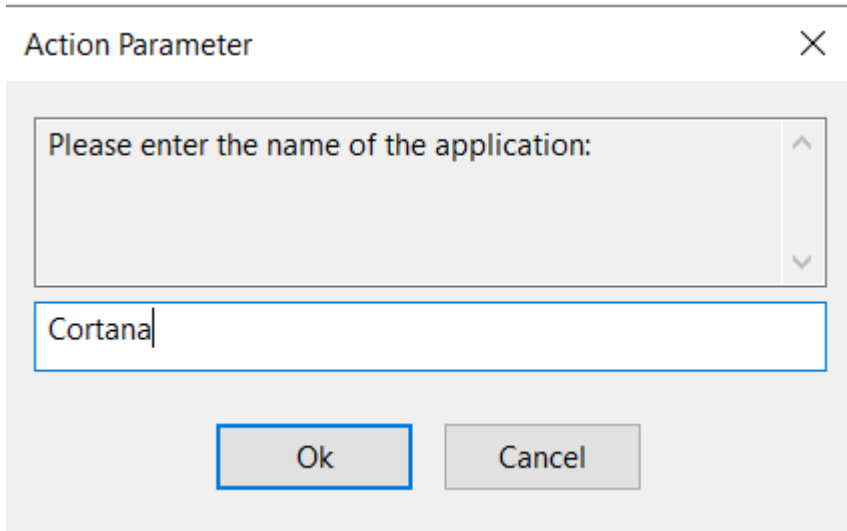

6. Target appropriate endpoints and click OK to deploy the action.

WINGET UNINSTALL: <APPNAME>

This task will use Winget to uninstall existing software in your environment.

To deploy this task, perform the following:

1. Identify the application you want to uninstall. This can be accomplished by viewing the BES Report, “Winget All Identified Installed Applications”
2. Deploy the task and enter the application name.

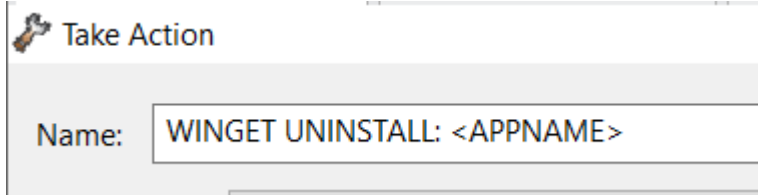

Action Parameter

Please enter the name of the application:

Cortana

Ok Cancel

3. Alter the name of your action

 **Take Action**

Name: WINGET UNINSTALL: <APPNAME>

4. Target your endpoints.

Winget Auto Offer

Auto Offer provides the ability to automate the creation of Winget Update Offers dynamically. It will gather a list of all Winget/Microsoft store applications requiring an update and deploy an active offer.

NOTE: When run, WinGetAutoOffer will delete all previous open offers and re-generate only those offers that are needed within the environment.

NOTE: Currently, Upgrading, Installing and Uninstalling applications using Winget require the target user to have local administrator privileges.

The screenshot displays the 'Offerings - BigFix Self-Service Application' window. The interface includes a top navigation bar with tabs for 'Action Request', 'Offerings' (which is active and shows a count of 2), 'History', and 'Dashboard'. Below the navigation bar is a search bar labeled 'Search for offerings'. On the left side, there is a sidebar with two categories: 'All Offerings' (count 2) and 'WINGET UPDATES' (count 2). The main content area is titled 'WINGET UPDATES' and features two update cards. The first card is for 'Microsoft Visual Studio Code Update', showing a checkbox, a source icon, the text 'Source: winget', a sun icon, and the label 'WINGET UPDATES', with a 'Get' button below. The second card is for 'Python 3.10.8 (64-bit) Update', also showing a checkbox, a source icon, the text 'Source: winget', a sun icon, and the label 'WINGET UPDATES', with a 'Get' button below. At the bottom right of the window, a status bar indicates 'Updated a minute ago'.

Deployment

To deploy Winget Auto Offer, follow the following procedure:

1. In the Winget Dashboard site, deploy the “Encrypt MO Account password” task using the root server as a target.
 - a. Enter the Master Operator password in the description tab.

Task: Encrypt MO Account password

Take Action | Edit | Copy | Export | Hide Locally | Hide Globally | Remove

Description | Details | Applicable Computers (1) | Action History (4)

Description

This Task can be used to deploy the SVC Account credential to API server

Parameter name	Parameter value
*Credential:	

2. In the Winget Dashboard site, deploy the “Deploy Winget Auto Offer” task using the root server as a target. Fill out the following action parameters:
 - a.

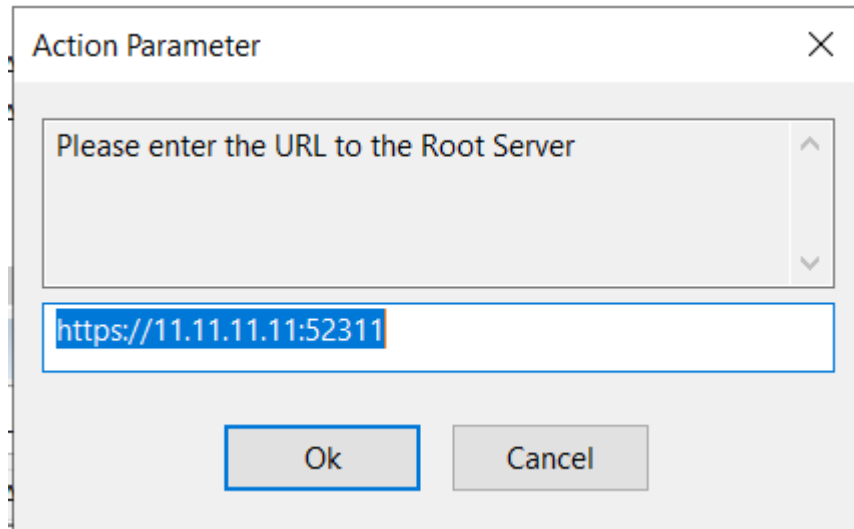

Action Parameter

Please enter the name of a Bigfix Operator

administrator

Ok Cancel

- b. Enter the URL to the Root Server.

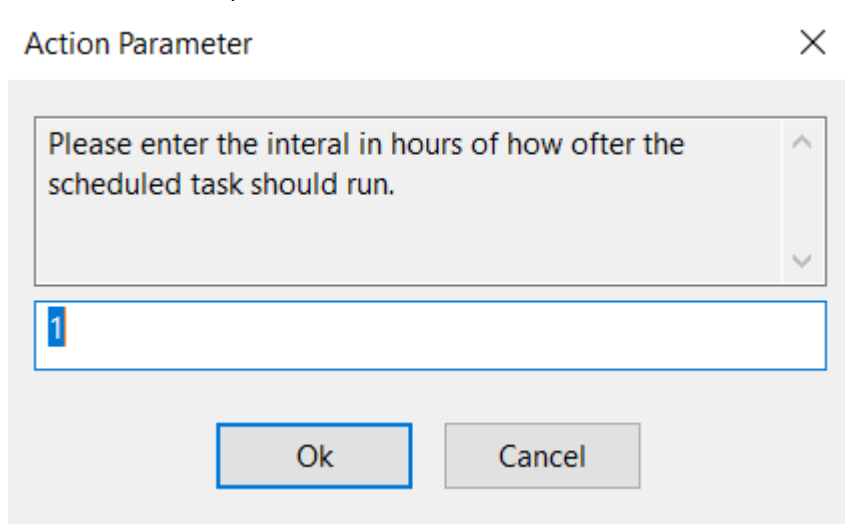

Action Parameter

Please enter the URL to the Root Server

https://11.11.11.11:52311

Ok Cancel

- c. Enter the amount of time in hours that the scheduled task should run (refreshing the Auto Action Offers).

Action Parameter

Please enter the interval in hours of how often the scheduled task should run.

1

Ok Cancel

3. As a catch-all, Deploy the task, “WINGET OFFER: Update All” and target all endpoints who have the WinGet Dashboard.

Timing

It is recommended that a ratio of 1 : .5 : .25 be used for scheduling

1. Schedule the scheduled task to run every 1 hour for testing, every 4 hours for production
2. Schedule the “Update WinGet Application Dashboard” task to run every 30 minutes for testing, every 2 hours for production
3. Schedule the “WINGET APPS” property to evaluate every 15 minutes for testing, every 1 hour for production.
4. Schedule the "WINGET ALL APPS" property to evaluate once a day.
